

COMPOSITE DOOR FRAME

When you are faced with hurricane conditions, rain, corrosive sea air, extreme temperatures or harsh sunlight.

CRAFTED FOR YOU

- Maintenance Free: resists swelling, rotting and splitting.
- Up to 70% more thermally efficient to wood.
- Material is energy efficient to produce, recyclable.

Westeck's Composite Door Frame PVC is a durable building material that works like wood but lasts much longer and requires far less maintenance, making it a more economical alternative. It outperforms pine in impact strength, water absorption, dimensional stability, screw-holding power, resistance to flame and maintenance requirements.

Durability and Strength

- Will not absorb moisture
- Will not rot
- Resist mildew or fungus
- UV and salt resistant
- Dimensionally stable – low thermal expansion index
- Offer excellent strength and surface hardness
- 100% insect resistant (including termites)
- Sanitary and 100% waterproof
