

# "PROTECT" FILM

Custom home builders and renovation specialists create beautiful dream homes, but they can leave the windows filthy during the building process. This could be from stucco, grout, paint or whatever the exterior décor is made of. After the home renovation or new build is complete, the last thing anyone wants to do is to spend time and money cleaning.

**Westeck "PROTECT" Film** prevents the dirt and disappointment, leaving beautiful clean windows due to our protective application. The film is applied at the time of manufacturing to ensure window protection for the custom home builder, remodelling company or contractor. New or existing homeowners are pleasantly surprised to find how clean their windows are!

At Westeck we take PROTECTive measures to ensure that every window, door and patio opening product is in perfect condition prior to shipping. This ensures a safe ride for our products in shipping and protection from remnants at your construction site.

The film is applied at Westeck's manufacturing plant, so custom home builders and renovation specialists don't have to waste time in applying tapes, coatings or sprays prior to the job. The clear, see through coatings allows for the natural light to be present throughout the interior design stage, while the exteriors are still being completed. The protective coating ensures easy removal once the job is complete.

## The main benefits of Westeck "PROTECT" Film

- The protective coating on all our glass products ensures protection against dirt and damage.
- "PROTECT" Film saves the customer or homeowner time and hundreds of dollars with post construction clean up.
- No harsh chemicals or by-products required and can be disposed of with construction site debris.

**Westeck "Protect" Film ensures your glass products are protected, with minimal** cleanup time, which keeps your new, clean windows, doors and patio openings looking beautiful.
